

# Transferpette® electronic

Ergonomics for fatigue-free operation

BRAND. For lab. For life.®

- + Ergonomic, handy design
- + Clear and intuitive operation
- + Up to 4,000 pipetting cycles on a single charge

# Get to know the Transferpette® electronic

## Ergonomic

If you pipette long series using electronic pipettes, work efficiency and the ergonomics of the instrument are paramount. The Transferpette® electronic micropipette is the perfect solution for efficiency and ergonomics, with its impressive easy and uncomplicated operational concept. The low weight, intuitive arrangement of control elements and balanced weight distribution of the Transferpette® electronic ensure fatigue-free operation and minimize the risk of RSI (repetitive strain injury). In addition, the adjustable finger rest allows every user, whether left- or right-handed, to fine tune the instrument for an ergonomically natural positioning of the hand in relation to the functional elements.

## Simple and intuitive

Five functions are available for different applications and media: pipetting, mixing, reverse pipetting, pipetting for electrophoresis and dispensing. The operational concept for these

functions is very simple: all functions are controlled by the four buttons under the clear display and then activated by the large, ergonomically positioned pipetting button.

The Transferpette® electronic draws its energy from a NiMH battery. One battery charge allows over 4.000 pipetting cycles. During the charging process, you can continue to pipette with the 1-meter charging cable plugged in. The battery refresh function provides a regeneration function for increasing the performance and extending the life of the battery.

## Easy maintenance and calibration

If readjustment is necessary after calibration, this can be done quickly and easily and without tools using the Easy Calibration technology.

On multi-channel instruments, the individual shafts and pistons with seals can be easily disassembled. As a result, the shafts and seals are easy to clean or replace.

## Transferpette® electronic- single-channel

Volume range of single-channel pipette models:  
from 0.5 µl to 5000 µl

NEW  
VOLUME  
1250 µl

## Transferpette® electronic- multi-channel

Volume range of multi-channel pipette models:  
from 0.5 µl to 1250 µl

- + Universal tip cone
- + Pipette shaft (pipetting unit) can be removed and is completely autoclavable (121 °C)
- + Individual pipette shafts on multi-channel pipettes are easy to replace

# Overview: the advantages of the Transferpette® electronic

The Transferpette® electronic single-channel pipette is available in 5 different models: 0.5 – 10 µl, 2 – 20 µl, 10 – 200 µl, 50 – 1000 µl and 250 – 5000 µl.

The Transferpette®-8/-12 electronic multi-channel pipette is available in 6 volume ranges: 0.5 – 10 µl, 1 – 20 µl, 5 – 100 µl, 10 – 200 µl, 15 – 300 µl, 50 – 1250 µl.

Handy design (form follows function), balanced weight distribution, pleasant housing material, intuitive software and user-friendly technical documentation were the focus of attention during development of the Transferpette® electronic as an overall ergonomic concept. The result is an inherently logical and self-explanatory operating principle.

## Charging socket

One battery charge allows over 4.000 pipetting cycles.

Transferpette® electronic

## Finger rest

Individually adjustable

## Hand grip

Slim, ergonomic shape

## Color-coded nominal volume

For quick visual confirmation

## Removable pipette shaft

Completely autoclavable (121 °C) pipette shaft

# The multi-channel pipettes Transferpette®-8 and -12 electronic

Transferpette®-12 electronic

Transferpette®-8 electronic

### Display

Clear and simple

### Intuitive operation

All functions with 4 buttons.

### Adaptable

Pipetting unit can be rotated by 360° to accommodate individual preferences.

### Minimal effort

Easy insertion and ejection of tips due to O-rings.

### Easy cleaning and maintenance

Individual shafts and seals are easy to remove, making cleaning and replacement simple.

**PROGRAMS**

# The right pipette tip for your Transferpette® electronic

Optimal results are achieved in combination with BRAND pipette tips and filter tips.

Our bulk packed tips as well as the 5 and 10 ml tips have the CERTIFIED LIFE SCIENCE QUALITY. All racked pipette tips and filter tips up to 1250 µl meet the quality level BIO-CERT® LIQUID HANDLING QUALITY.

BRAND offers a full tip system for any application requirement. In addition, tips from many other manufacturers can be used with the Transferpette® electronic. More detailed information is available on request.

USER TIP

## Programs

Besides pipetting comfort, an important design goal for the Transferpette® electronic was rapid and intuitive work, and simple, fast program changes. The objective was to gain the advantages of electronic operation with no trade-offs.

\* The GEL mode is not included for single-channel and multi-channel pipettes with nominal volume from 1000 µl because these volumes are rarely used in electrophoresis.

### Pipetting (PIP Mode)

The 'standard' program. The set volume is aspirated by the pipette, and then discharged.

### Mixing of Samples (PIPMix Mode)

Program for mixing of liquids. The sample is repeatedly aspirated and discharged, and the number of mixing cycles is displayed.

### Reverse Pipetting (revPIP Mode)

Program specially designed for the pipetting of liquids with a high viscosity, high vapor pressure or foamy media.

### Pipetting with Electrophoresis (GEL Mode)\*

Program for the loading of electrophoresis gels. The required sample volume is aspirated at the desired, adjustable speed, and is then discharged very slowly. The exact volume of liquid discharged is shown in the display as it is discharged.

### Dispensing (DISP Mode)

A program for the dispensing of liquids in a series of equal aliquots. A volume that has been aspirated is dispensed in steps.

### Easy Calibration Technique (CAL Mode)

Every laboratory that is certified according to ISO 9001 or accredited according to ISO/IEC 17 025 or works according to the GLP/GMP guidelines must regularly calibrate its testing equipment and adjust as necessary. Program for making quick adjustments to the instrument, without tools. By changing the factory setting, <CAL> appears automatically in the display. The factory setting can be restored at any time.

### Battery-Refresh (batt Mode)

Regeneration function for increased performance and extending the service life of the batteries. The world's first microliter pipette with this function.
